Associated Parties

Vet Practice: ROLLING HILLS VETERINARY SERVICE
 Owner, Premise: Lisa Gregory
 Veterinarian: Kelly Liming Vet Code:8232

Animal Information

Goat - Nigerian Dwarf

Qty:9

Lab Findings**Serology**

Specimen Test Name	Result
Gaudete - CAPRINE - Goat - Nigerian Dwarf - Female - 2 Years	
Serum - 1 Caprine Arthritis Encephalitis Virus AGID	Negative
Amber - CAPRINE - Goat - Nigerian Dwarf - Female - 20 Months	
Serum - 2 Caprine Arthritis Encephalitis Virus AGID	Negative
Avril - CAPRINE - Goat - Nigerian Dwarf - Female - 19 Months	
Serum - 3 Caprine Arthritis Encephalitis Virus AGID	Negative
Annie - CAPRINE - Goat - Nigerian Dwarf - Female - 9 Months	
Serum - 4 Caprine Arthritis Encephalitis Virus AGID	Negative
Arria - CAPRINE - Goat - Nigerian Dwarf - Female - 8 Months	
Serum - 5 Caprine Arthritis Encephalitis Virus AGID	Negative
Tara - CAPRINE - Goat - Nigerian Dwarf - Female - 8 Months	
Serum - 6 Caprine Arthritis Encephalitis Virus AGID	Negative
Zuri - CAPRINE - Goat - Nigerian Dwarf - Female - 8 Months	
Serum - 7 Caprine Arthritis Encephalitis Virus AGID	Negative
colvig - CAPRINE - Goat - Nigerian Dwarf - Male - 8 Months	
Serum - 8 Caprine Arthritis Encephalitis Virus AGID	Negative
Quinn - CAPRINE - Goat - Nigerian Dwarf - Female - 8 Months	
Serum - 9 Caprine Arthritis Encephalitis Virus AGID	Negative

Tested by: Brian White, Test Date: 9/25/2014
--

Mycobacterium paratuberculosis ELISA

The cut-off value for a valid assay is the mean of the negative controls plus 0.100 for cattle, and 0.200 for sheep and goats, e.g.- if the two negative controls were 0.055 + 0.085, the cut-off would be 0.070 + 0.100 = 0.170 for cattle, or 0.070 + 0.200 = 0.270 for sheep or goats. A **Positive** result is interpreted as a sample absorbance value greater than the cut-off value. An **Inconclusive** result is interpreted as a sample absorbance value 10% above or below the cut-off value.
